

Life OS, whole and inclusive.

The brand, the planners, the app, the private network, the book device, and the mission - in one document, written so anyone can pick it up and belong here.

The promise: "Do different, think different, be different - Be Off*Script." Secondary hook: "Shake up your life." Product slogan: Boredom = Death.

Created by Amber Marie Wiggins, Kosciusko, Mississippi. Contact: lifeosoffscript@gmail.com · Main site: lifeosoffscript.my.canva.site/home

Not a productivity system. A mirror.

Life OS exists for people who are done performing productivity. It does not ask anyone to optimize, hustle, or keep up. It asks them to notice their own life, write it down honestly, and change it on purpose. The one-liner that holds the whole brand together: **Off*Script is a life design brand that helps people stop living by default and start living differently, intentionally, and on purpose.**

The philosophy, in five lines

- **Chaos is not disorder.** A messy season is material, not failure.
- **Monotony equals death.** The slogan on the product is Boredom = Death - boredom is for the average person; this brand is not for average.
- **Values before performance.** What matters to you outranks how impressive it looks.
- **Identity evolves.** You are allowed to become someone else, more than once.
- **Learn who you are, one year at a time.** Growth is annual, seasonal, and patient - organized around one word a year and no more than six core focal goals.

Who made it, and why it sounds like this

Life OS was created by **Amber Marie Wiggins** of Kosciusko, Mississippi - entrepreneur, designer of personal organization systems, and author of a book in progress. Her named creative inspiration is **Benrik** (Ben Carey and Henrik Delehag), the London duo behind the absurd daily-task diaries that sold more than 400,000 copies. Her standing creative rule follows from that lineage: start outrageous and loud, then tone down - because starting moderate and trying to get louder later never works. The voice stays irreverent and anti-performative on purpose; anything that sounds like optimization theater gets cut.

The brand system

Colors are navy, cream, teal, hot pink, and gold, with a compass-and-star motif and the styled name **Off*Script**. Editions are color-coded by year: **2027** is the classic teal-and-pink cosmic nebula, **2028** is aurora-and-cosmic zodiac styling, and **2029** is gold nebula. The website's pink-teal theme (teal #2da2ee, hot pink #ea4798 on cosmic dark) is the reference the flagship PDF and the app match.

Eight ways to be different

Every product is the same promise in a different form. The map below is the whole line at a glance - each row is one way of living differently, and the product built to carry it.

DIFFERENT HOW	PRODUCT	WHAT IT IS
Do	Chaos Year (dated flagship)	The year-long dated companion - the flagship planner.
Start	Undated editions	Begin any day of the year; no dead pages waiting on January.
Marry	Wedding line	Becoming an Off*Script Bride in 365 Days, plus the free wedding-party app.
Think	Zodiac editions	Twelve zodiac covers, astrology woven into the year.
Reflect	The Life OS app	Daily entries, debriefs, and Ask Mei in your pocket.
See yourself	Mei	The AI companion who reads your week back to you (see page 5).
Measure	Anti-goals	Track what you are refusing, not just what you are chasing.
Live	Challenges	Daily Chaos Challenges and GPS-style missions that get you out the door.

The 2027 Chaos Year flagship

The flagship is a **1,252-page dated planner** (the current master is version 5) built around 365 daily spreads, weekly debriefs, and monthly and quarterly reviews, with Off*Script asterisks and Boredom = Death headers throughout and the Life OS footer on every page. A proofread by **CreaO** caught real print defects - a text overlap on the January 4 spread, stray white boxes over header fields, and an obsolete website URL still sitting on twelve monthly dividers - and those fixes are queued for a version 6 before anything goes to print. That is the process working as intended: the book gets read hard before a buyer ever sees it.

The physical **Chaos Year Kit** is two hardcover spiral volumes (about 612 pages each), sticker sheets, a pen or marker, a snap-in bookmark, a magnet, a bumper sticker, app access, and the standard digital PDF. Pricing waits on the printer's quote on purpose - the rule is a thin margin is fine, but the buyer must feel they got their money's worth.

The wedding line, and Life OS in your pocket

Becoming an Off*Script Bride in 365 Days

The wedding planner is a **511-page** book (renamed September 26, 2026) that passed full quality review, with a Dress Studio section at pages 492-502. Provisional pricing is \$20 pre-order, \$25 after the drop, and \$40 printed. The twelve **zodiac editions** run 1,289 pages - beyond print-on-demand limits, so they are PDF-only unless split into volumes.

The companion **wedding app** is deliberately free and link-based, with no license wall: party members open their own HQ page by link, one page per role across all seven wedding-party roles, with roles the couple can add, delete, or restore. The old bride-to-maid-of-honor chat wall was replaced with **“magic” post-it notes** on the HQ page - no direct messages, no backend, nothing to moderate. Paid value lives in the print and PDF; the app is the funnel.

The Life OS app

The app is a web app at heart - **React and TypeScript with a Node backend** - wrapped in a native Android shell with Capacitor, so it installs as a sideloadable APK, runs in any browser, and adds to a phone's home screen. An Android debug build (app ID app.offscript.lifeos) was verified October 2, 2026; iOS is scaffolded and needs a Mac to build; the desktop experience is the browser and progressive web app.

- **Daily life, structured:** daily entries with a real 365-day holiday mapping, weekly debriefs, and snapshots Mei can read back to you.
- **Pinned days that are ours:** February 9 is Mardi Gras, April 20 is High Spirits Day, and September 27 - the founder's birthday - is Founder's Day, in hot pink and neon cyan. The app's daily view mirrors the flagship's special spreads.
- **Sign-on, your choice:** Google, Apple, Facebook, email, and SMS were all approved; Google, Facebook, and email are free, while Apple and SMS stay dark until spending is approved.
- **Hardened, not hopeful:** admin authentication on the hidden wall, user blocking, and passing lint, build, and tests as of the September 26, 2026 hardening pass.

Honest status: the Android repository has diverged from GitHub and will not be auto-merged; deployment to Railway waits on the founder's account; and the apps stay local until she says otherwise. Open items are listed, not hidden - that is the brand.

A mailbox, not a timeline

The Off*Script network: private by design

The community layer - the **Chaos Wall** and private **direct messages** - will not be openly available. It is gated and private, like the app itself. The rule for social is **outbound-only**: you message your people directly. There are no feeds, no scrolling, and no algorithm deciding what you see. Conversations ride the Life OS account, so the same people and the same threads are there whether you open the app, the phone, or the book device. Inside the app, the **Playdate** game corner keeps the same spirit - no timers, no scores, nothing to lose at.

Chat is also where the device's pen earns its keep a second way: handwriting recognition turns scrawl into a sent text message, the way Apple Scribble and Samsung's pen-to-text already work. Write "on my way" in the reply box and it sends as typed text. Anything longer gets the small on-screen keyboard - but direct messages are short by nature, so the pen covers almost all of it.

Mei, the AI companion

Mei is the founder's "User Defined" Messages Improved bot, and every AI endpoint in the app runs through Mei, called directly by bot ID - **no keys, no tokens** - a setup tested live on September 23, 2026. **Ask Mei** pulls your last seven days of entries, recent snapshots, and your latest weekly debrief into the conversation, token-bounded, so Mei answers from your actual week instead of generic advice. The same material feeds diagnostics.

Two exceptions were approved on October 2, 2026, and only two: **Gemini** powers the AI media studio (music, image, and video generation) and a pre-existing fallback inside the diagnostics endpoint. Everything else stays on Mei, and the Gemini key lives server-side only - never in the repository, never in the client.

Why this matters: an AI that reads your journal is a trust decision, not a feature. One bot, one ID, no scattered keys - the smallest possible surface for the most personal data in the product.

The crease is the spine

The hardware vision is a **foldable book**: one screen that opens like a paper book. The insight that unlocked it - in the founder's words, the crease *is* the spine. Nobody writes across the gutter of a paper book, so nobody drags a pen across the fold; the crease lands exactly where a book divides, and the interface simply agrees with it. It is the Nintendo DS idea at ten times the size: beloved, not weird - Nintendo sold 150 million of them.

- **Each screen has a job:** left does A, right does B - planning left, journaling right. No window management, ever.
- **Two postures:** a 360-degree friction hinge gives flat book mode (primary - eyes and pen on the same page, like paper) and propped laptop mode, where the top screen rests or goes passive while you journal below.
- **Built like an appliance:** weight, battery, and brains on the right side for balance, a single USB-C port, locked bootloader with verified boot, and the Life OS interface as the whole experience - AOSP plumbing underneath, never exposed.
- **Wi-Fi only, offline-first:** everything works with no connection and syncs at home. GPS needs no cell signal, so geocache-style missions work in the woods with map packs downloaded ahead. "It cannot interrupt you from the cloud because it is not in the cloud" is a selling point.
- **Not for 2027:** the horizon after the paper planner and the app. Prototyping starts on existing hardware - a Lenovo ThinkPad X1 Fold (16-inch) or ASUS Zenbook 17 Fold is the dev kit today.

Nobody's hands are wrong

Inclusion is a specification here, not a paragraph of good intentions. The input trio covers every hand - and no hands:

INPUT	HOW IT WORKS
Pen-first	Haptic stylus on a textured, paper-feel screen; handwriting-to-text keeps the journal searchable without typing. Rollable screens were considered and rejected - a scroll is not a book.
Keyboard-only mode	A full setting: everything reachable from the on-screen keyboard, no stylus required. The popup keyboard otherwise appears only for passwords, search, and URLs.
Voice	Full voice control and dictation - the whole device operable hands-free. Dictating a Chaos Wall post while pacing the kitchen may be the most Off*Script thing it does.
Signing (roadmap)	Fingerspelling-to-text (26 letters plus numbers, camera-based) is the tractable first step. Full sign language recognition is a research problem industry-wide and is claimed as a horizon goal, not a shipped promise. All camera processing runs on-device - a camera that watches your hands never phones home.

Sold online, made honestly, reviewed in public

Where and how it sells

Life OS is **online-only** - no in-person sales. The flagship pre-order is **\$19** via PayPal (paypal.me/AmberWiggins0927): the Canva Shop button leads to the WordPress order page (delivery email, dedication name, quantity, notes), then to PayPal in a new tab. The **Canva site** (published October 1, 2026) is the main site; **WordPress** carries the order flow, shop tabs, and the Khaos Krew signup as its homepage.

Printing is **self-fulfilled**: print-on-demand author copies, kits assembled and shipped at home. Lawrence Printing confirmed (October 3, 2026) there is no POD path with iridescent foil covers - so the open choice is POD without foil or offset with foil. The quote call decides; nothing ships before it lands.

The Khaos Krew

The launch is being reviewed before it is sold. The **Khaos Krew** - writers, coders, editors, and the extremely bored - signs up through the WordPress homepage to review the entire product: a nine-field form asking for a full-review commitment, a slogan screener, and a no-ghosting pledge.

The roadmap, without varnish

HORIZON	WHAT HAPPENS
Now	Flagship version 6 print fixes; the printer quote call (POD vs. offset, foil decision); the October social calendar already scheduled and running.
Next	App deployment decisions - hosting, repository reconciliation, sign-on spending - each the founder's explicit call, in order.
Horizon	The foldable book device, prototyped on existing foldable laptops; full sign-language recognition as the research matures.
